It is also extremely useful to researchers in the fields of physics and electronics, from those at the beginning of their careers to senior scientists.

Laser Diodes and Their Applications to Communications and ...

What is a Laser Diode? Laser diodes are the semiconductor lasers which generate highly intense coherent beam of light. These were developed by Robert N. Hall in early 1960s and are also referred to as injection lasers. It is well known that an incident photon can interact with the atom to release a photon which will be identical to the impinging photon in all respects viz., phase, frequency ...

Laser Diodes used for Telecom: In the telecom field 1.3 μm and 1.55 μm band laser diodes used as the main light source for silica fibre lasers have a less transmission loss in the band. The laser diode with the different band is used for pumping source for optical amplification or for the short-distance optical link.

Laser Diode Construction, Working and Its Applications

Laser diodes are used in optical communication, laser pointer, CD drives and laser printer etc. Tunnel Diode Tunnel diode was invented by Leo Esaki in 1958 for which he received Nobel prize in 1973, which is why it is also known as Esaki diode .

Types of Diodes and Their Applications - 24 Types of Diodes

The value of capacitance is changed by varying reverse voltage which changes width of the depletion layer. Refer Varactor Diode . Application: The varactor diode among these types of diodes is used to tune TV and VHF radio receiver sets to desired stations. This process is known as AFC (Automatic Frequency Control).
